

TRUSTED SOLUTIONS AND INNOVATION

DieMax XL™

Maximum Life Springs

- ◆ ISO Color Codes
- ◆ Made in America

Service We Deliver and Quality You Can Depend On

DANLY IEM is a leading manufacturer of die sets and die component products supplied globally to the parts forming industry. Backed by years of tool and die experience, quality and innovation are some of the reasons why our name is respected throughout the world. We have taken the lead role in creating and bringing new products to customers and helping them find solutions that improve their operations. Based on the capabilities **DANLY IEM** offers, we can help you to meet the demands of quick deliveries, technical support, quality products and competitive prices. **DANLY IEM** and its' broad distribution channels and direct sales personnel will assist you in any way to make your product a better and more profitable one.

Whether you purchase on-line or in person, you will receive the same reliable service **DANLY IEM** is known for. We understand the demanding schedules of die builders and production personnel and have developed efficient manufacturing processes to shorten product lead times as well as put inventory on our shelves so you can have it in your facility when you need it. Put the **DANLY IEM** network to work for you. We've got the service you've been looking for.

Included in our full line offering are both inch and metric size die sets and die components that are designed to numerous die standards including ISO, NAAMS, JIS and many large automotive and appliance manufacturers' standards. The complete product offering includes:

- Ball bearing and friction style die sets including custom and catalog sets
- Machined plate
- Guide posts & bushings
- ISO and JIS Die springs
- In-die tapping units for both mechanical and hydraulic presses
- Formathane® Urethane springs, strippers, sheets, bars, rods and die cover film
- Diemakers' supplies such as pry bars, dowel pins, hoist rings, clamps and fasteners
- Standard and self-lubricating wear product including wear plate, wear strips, gibs, keeper plates and guide blocks
- Cam units, including Mini™, Aerial and Die Mount styles
- Accubend™ Rotary Benders
- Standard and Ball lock punches and retainers
- Air presses
- Pad retainers
- Nitrogen gas springs

MADE IN AMERICA

Our facility has been Registered by Underwriters Laboratories, Inc. to the International Organization for Standardization ISO 9001 Series Standards for Quality.
Registered by UL to ISO 9001.

Identi Springs

Have you standardized on non-ISO coded spring colors? Try our Identi Spring series, striped to make conversion to ISO easier. The Identi Springs are available in 4 load ratings, including Light (blue), Medium (red), Heavy (gold) and Extra Heavy (green) loads.

JIS Springs

JIS die springs are manufactured and color coded to the Japanese Industrial Standard. The product line consists of five load ratings: Extra Light, Light, Medium, Heavy and Extra Heavy loads.

DieMax XL™ Maximum Life Springs

Four load classifications - in standard ISO sizes for dies, jigs, fixtures, and general tool work.

Danly IEM springs are offered in a range of lengths, diameters, and load classifications that conform to the ISO 10243 International Standard and the NAAMS (North American Automotive Metric Standard), including color coding for easy identification of load range.

ISO 9002 Registered Quality

All **Danly** die springs are manufactured to ISO 9001: 2000 quality standards consistent with the **Danly** reputation for providing the stamping industry with the most carefully engineered die sets and diemakers'

supplies. Comparison testing of the operating life of **Danly** die springs and competitive products have shown that **Danly** springs offer significantly longer life.

The exceptional quality of **Danly** die springs has made them popular for a wide variety of applications. For example, **Danly** die springs are commonly used in general tool work, such as jigs and fixtures, as well as in industrial clutches and brakes and as components in farm machinery and aircraft mechanisms. Many manufacturers specify **Danly** die springs because the quality and

service life of these springs improves the reliability and performance of their products.

Whatever your application might be, you can be sure that the springs you select from this catalog will consistently provide rugged, dependable spring performance. They will live up to the **Danly** reputation for quality and value.

For help with your selection, or to order die springs, contact **Danly IEM** or your authorized **Danly IEM** distributor.

DieMax XL™ Maximum Life Springs

DieMax XL™ Maximum Life Springs - springs you can rely on.

A combination of enhanced raw material, optimal spring design, innovative manufacturing processes, and broad distribution channels allow the DieMax XL™ spring to yield the best, most dependable performance and availability combination, time after time.

Spring Wire

Manufactured from spring quality chromium silicon alloy steel in accordance with ASTM A1000-99 specifications. The high tensile strength and superior heat resistance wire characteristics contribute to the low-stress, long life spring design.

Enhanced Design

Our spring starts with a modified trapezoidal cross section and changes to a “D” cross section after coiling. This wire cross section, exclusive to

Danly, has significantly lower stress levels during compression compared to competitor designs. The “D” cross section also allows for more coils per spring while providing a greater amount of spring travel to solid when compared to competitor springs.

Physical Dimensions and Load Ratings

Computer controlled coiling and spring setting equipment allow tight control over the critical spring characteristics. Every manufactured lot of DieMax XL™ springs is carefully inspected for hole/rod fit, free length, spring rate, solid height, squareness and physical appearance. All inspection results are recorded and analyzed to ensure compliance to quality standards. These tight tolerances and highly inspected attributes guarantee the springs will

work freely over the rods or freely in the holes specified without binding. They also ensure that the free lengths, solid heights and spring loads are compatible from spring to spring and lot to lot for predictable, long-life performance.

Manufacturing Processes

In addition to the optimal, low-stress spring design, the continual investment in the most advanced coiling and spring processing equipment allows **Danly** to offer a premium, long-life, mechanical spring solution. From the computer controlled spring coilers with in-line SPC data collection, the springs are routed through a series of steps including shot peening to reduce working stresses, and set removal which ensures the spring length and load will not relax in the tool.

Coilers - Using the latest in CNC coiling technology, springs are produced with much better predictability and consistency in performance, rates and lengths.

SPC Quality Assurance - Using SPC software, operators insure that every production process meets our high quality standards.

Computer Controlled Spring Testing - Utilizing custom software, spring testers track and verify consistency in spring dimensions and rates.

Modified trapezoidal cross section of rectangular wire springs changes to a “D” cross section during coiling to achieve a low stress level that means longer spring life.

Ends of each spring are closed and ground square to assure that the spring will stand on either end and provide a maximum bearing surface.

Spring Selection Steps

If the diameter and length are known, turn directly to dimension tables on pages 6 through 23 to select springs with desired total load.

If diameter and length are not known, use the following seven spring selection steps and refer to the rate column of the dimension tables for spring selection.

In determining the length of a spring, it should be remembered that maximum delivered spring load is obtained by selecting longer springs. For best economy and

saving of space, choose Light and Medium Load springs or the Heavy Load spring having a free length equal to six times the travel, or an Extra Heavy Load spring having a free length equal to eight times the travel. If ratios lower than these are used because of height limitations, the number of springs required will be substantially increased.

Step 1

Estimate the level of production required of the die - short run, constant production, etc.

Step 2

Determine compressed spring length "H" and operating travel "T" from the die layout.

Spring Selection Steps

Step 3

Determine free length "C" as follows:

Decide which load classification the spring should be selected from - Light, Medium, Heavy, or Extra-Heavy Load. Then choose the figure nearest the compressed length "H" required by the die design from the appropriate charts below on pages 4 and 5. Read corresponding "C" (free length).

Step 4

Estimate total initial spring load "L" required for all springs when springs are compressed "X" inches or millimeters.

Step 5

Determine "X" (initial compression) by using the following formula:

$$X = C - H - T$$

Step 6

Inch: Determine "R" (total rate for all springs in pounds per 1/10 inch) by using the following formula:

$$R = \frac{L}{10 \times X}$$

Metric: Determine "R" (total rate for all springs in newtons per millimeter) by using the following formula:

$$R = \frac{L}{X}$$

Step 7

Select springs as follows:

1. The free length "C" must comply with the length determined in Step 3.
2. Divide "R" in Step 6 by the number of springs to be used (if known) in order to get the rate per spring. Then refer to the following pages for the catalog number of springs having the desired rate. If the number of springs is not known, divide "R" from Step 6 by the rate of the spring you select for the correct number of springs.

DieMax XL™ Medium Load Springs

Product Features:

- ◆ ISO color - Blue
- ◆ High tensile strength chrome silicon material
- ◆ Optimal rectangular wire design
- ◆ Long life design for increased spring run-time

DieMax XL™ Heavy Load Springs

Product Features:

- ◆ ISO color - Red
- ◆ High tensile strength chrome silicon material
- ◆ Optimal rectangular wire design
- ◆ Long life design for increased spring run-time

DieMax XL™ Light Load Springs

Product Features:

- ◆ ISO color - Green
- ◆ High tensile strength chrome silicon material
- ◆ Optimal rectangular wire design
- ◆ Long life design for increased spring run-time

*Note: 1 Newton=0.10197 Kg (Force)

DieMax XL™ Medium Load Springs

Product Features:

- ◆ ISO color - Blue
- ◆ High tensile strength chrome silicon material
- ◆ Optimal rectangular wire design
- ◆ Long life design for increased spring run-time

*Note: 1 Newton=0.10197 Kg (Force)

DieMax XL™ Heavy Load Springs

Product Features:

- ◆ ISO color - Red
- ◆ High tensile strength chrome silicon material
- ◆ Optimal rectangular wire design
- ◆ Long life design for increased spring run-time

*Note: 1 Newton=0.10197 Kg (Force)

DieMax XL™ Extra Heavy Load Springs

Product Features:

- ◆ ISO color - Yellow
- ◆ High tensile strength chrome silicon material
- ◆ Optimal rectangular wire design
- ◆ Long life design for increased spring run-time

*Note: 1 Newton=0.10197 Kg (Force)

DieMax XL™ Round Wire Die Springs

Inch Sizes Round Wire Construction

- ◆ Available in light, medium and heavy load ratings
- ◆ Manufactured in accordance with ASTM-A232 specifications
- ◆ Uniform hole and rod sizes matched to conventional sizes
- ◆ SPC quality assurance
- ◆ Danly quality means extra long life and reliable performance

Spring Accessories

Spring Cages

- ◆ Dandy spring cages enhance die spring life by providing a flat, hardened die pocket for spring operation.
- ◆ Cages are available for metric and inch spring diameters from 3/4" - 2" (20mm - 50mm).
- ◆ Accommodate standard metric and inch guiding rods and drill diameters.
- ◆ Material: 0.049" / 1.245mm case hardened cold rolled steel with black oxide finish.
- ◆ Conforms to NAAMS standards.

Spring Accessories

Spring Retainers

- ◆ Danly spring retainers hold individual springs firmly in position while the die is being assembled or disassembled. Pre-loading the spring is easy since the springs can be set individually, which avoids working against the combined force of the springs.
- ◆ Available for springs 1-1/4" (32mm), 1-1/2" (38mm) and 2" (50mm) diameters and any free length where clearance permits.
- ◆ Material: steel

Load at a Given Rate: _____

Application Explanation

Finish (Painted, Unpainted, Plating)

Critical Tolerances, Certifications or Inspections Required

Notes

DieMax XL™ Maximum Life Springs

The Danly IEM Value Proposition

- I. **Danly IEM** is recognized as the leader in manufacturing quality die sets and related products to the global parts forming industry. Our reputation has been built by satisfying customer needs, and we are very strong in the automotive and appliance industries.
- II. **Danly IEM** offers outstanding delivery on a consistent basis. Choosing us as a supplier means that our customers have a competitive advantage in delivering their products to the market.
- III. **Danly IEM** has complex machining capabilities on die sets at several strategically located facilities. Locations throughout the USA means lower shipping costs and allowing **Danly IEM** to machine complex die sets means the customer's machining centers have additional capacity.
- IV. **Danly IEM's** vast breadth of products assures innovative solutions. We strive to address customer problems by utilizing our research and development department as well as other technical professionals.
- V. **Danly IEM** has a technically trained sales force and distributor channels with engineering support. Sales, marketing and engineering professionals are available to support our product lines.

- **Competitive Prices**
- **Reliability and Performance**

**...A LEADING MANUFACTURER
AND INNOVATOR OF DIE SETS
AND DIE COMPONENTS
SUPPLIED GLOBALLY TO THE
METAL FORMING INDUSTRY...**

- **High Quality Design & Construction**
- **Outstanding Service & Support**
