

# SecurCab™

## Automated Modular Cabinet Storage System

### IT'S TIME TO REDUCE YOUR TOOLING COST

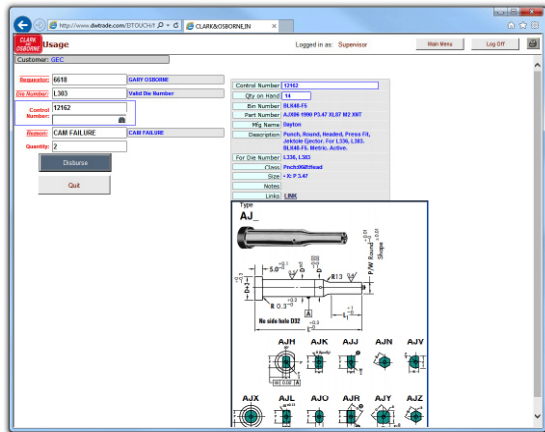

Tracking and managing your "MRO" costs is a must in today's economy.

Our ATIM System decreases real costs:

- ⇒ Maintains accurate stock levels.
- ⇒ Stops over-ordering.
- ⇒ Tracks consumed tool cost.
- ⇒ Reduces die maintenance budget.
- ⇒ Integrates with other systems or stand alone

With the SecurCab™ system you can now accomplish this task!

SecurCab™ automated modular storage cabinets are at the heart of the ATIM system. Unique, simple electronic locking controls your important MRO supplies 24/7. Specialized web based software can be used alone or interfaced with other software programs. The SecurCab™ storage system provides a secure distribution/vending method that automates the paper trail and provides effective restocking and usage tracking.

Optional Handheld Barcode Scanner

### ATIM Service

We also offer a vendor-managed inventory service (VMI) for metal stampers and other industries. We supply and manage items such as punches and buttons, guide posts and bushings, cam units, springs, cylinders, and die components.

The service includes SecurCab™ products and our International Materials Management (IMM) software. The complete package is an **Automated Tool-room Inventory Management (ATIM)** system. It enables metal stampers to drastically cut their cost of acquiring and managing materials for die maintenance and repair.
